OpenGLChecker provides users with a way to find out information regarding their OpenGL version and specifications, while also playing the role of a benchmark tool for the GPU. Gather data about the OpenGL accelerator This application can help you get details concerning the OpenGL 3D accelerator your graphics card comes with, such as its version, the included edition of the OpenGL Shading Language (GLSL), the used graphics renderer and the GPU manufacturer (called 'implementor'). Also, it retrieves information about all the available OpenGL extensions and determines their total number, which work together in order to provide enhanced rendering capabilities and extended performance to your graphics card. Unfortunately, there is no option to disable them. Benchmarking capabilities As mentioned above, the application can also act as a reliable benchmark utility, ready to assist you in assessing the performance of your graphics card. It integrates two different tests for this hardware component, called 'Blendermark' and 'Terrain'. During each test, OpenGLChecker displays 3D video graphics that require high resources, in order to evaluate the real capabilities of the GPU. You can terminate a test anytime you want to with the push of a button. The generated result report displays the average frames per second, the maximum achieved FPS rate and the number of updates per second. Dull interface Focusing on efficiency and functionality rather than appearance, OpenGLChecker comes with a rather poor user interface that could definitely use a makeover. Even so, the advantage
