Timesheets Lite is an app specially designed to offer you a helping hand in doing so. If organized properly, it brings you, or your business a little closer to success. Intuitive, and user friendly interface The way in which this utility is designed makes it accessible, and easy to use by nearly anyone. Everything you can keep track of is placed in a different tab, for a better view over each situation. In case you don't understand how to use the application, or you find it difficult to move around, rest assured, because there are helpful tips, and hints for everything you do. Furthermore, you are offered help from the beginning, and there are also sample users, and situations to make you catch a glimpse of what you will be able to do. Organize your projects, and your team You are able to create different users, each with its own clearance. Depending on the rank of the user, it gains access to specific options, such as project, or contact maintenance. Only a "Super User" will be able to access, let alone modify, and organize all of those options. There is also a messaging system put at your disposal, to increase, and ease communication with your team. Time being such an important factor in each business, it can be carefully kept under watch. You can view the total time spend on specific tasks, as well as weekly, and monthly totals. To end with In conclusion, Timesheets Lite puts at your disposal a useful set of options to better manage your business. With its intuitive, and user friendly interface, not to mention the help it offers with every action you make, the application proves to be a suitable partner for a little better management of projects. In this video i will teach you how to create an application for android using j2me. The things you will learn in this video is: 1. Creating a new project using JCreator. 2. Importing the SMPP module and creating the necessary classes and files. 3. Creating the application main window using SMPP. 4. Creating the chat page to display the chats sent and received. 5. Calling the SMPP module for sending a message. 6. Creating the details page to display the message received. 7. Managing the Details page using buttons. 8. Confirming the confirmation from the user. To view the complete source code of the application you should subscribe to my channel by clicking on the subscribe icon. Please like if

✔ User friendly interface, and intuitive tools ✔ Help is provided for every action ✔ You can create separate users and give them different access ✔ User Maintenance and Clearance options ✔ Backup options ✔ A messaging system ✔ Share function to send reports to your colleagues ✔ Mobile compatibility Free to use time tracker 7.97 48 Reviews Latest from Google Play Android Apps & Games Business Money Shopping Finance Reference 21 Users Developer Organization \$35.01 Get a more advanced and native Android time tracker and get many tools to track time, develop your projects and increase your productivity! Clean and simple. For the office workers and daily time trackers, this app can be a realistic and easy to use timer. This timer is simple and the UI is clean. Use your money for better and different time tracking features. For example, you can customize your timer & schedules, you can create new projects and assign points. You also can set a timer when you have been working more than 40 hours so you can better track your work hours. You can also set your the timer to be active until your work is done. The timer is accurate within 5 minutes. The only annoying thing is that it doesn't have a cold start feature, you have to turn it on first. A simple application that does the job. Simple and easy to use. When you have a job at your home, at your office, or at your computer at a fast growing company, you'll always want a timer that works at exactly the right time every time. This way, you can be efficient and focus on your daily activities and projects. Time Clock is a time tracker app designed for your needs. In addition to a timer, you can see your current schedule, a daily schedule, and your upcoming schedule in one app. You can also change the hour and minute, assign tasks, track points and money, and create projects. This app has a few limitations, like not being able to log in automatically to an account and not being very customizable. Tracktime, track your hours and do some more! Time Clock has a lot of features packed in it, you can track your hours, you can set a schedule, you can also have a reminder every minute. If you want, you can
