What's more, you can select the server types, namely Windows NT workstations and servers, domain controllers (PDC, BDC), standalone, terminal or SQL server, and others. Event Log Explorer allows you to work with multiple panes, view event logs on different computers, group PCs so you can easily open the event log for the selected computer, merge several logs into a single view, as well as archive large event logs. You can print the generated information, or export it to HTML, XLS, or other file formats, create analytical reports, get informed about new events by receiving notifications, view computer properties, and customize the events in terms of foreground and background colour, and font style.
